TITLE: Evaluating the activity of silicon-copper alloys used for the direct synthesis of methyl-chlorosilanes

SOURCE: Khimiya i prakticheskoye primeneniye kremneorganicheskikh soedineniy; trudy konferentsii, no. 6: Doklady, diskussii, resheniye. II Vses. konfer. po khimii i prakt. prim. kremneorg. soyed., Len. 1958. Leningrad, Izd-vo AN SSSR, 1961, 235-239

TEXT: The following results were obtained by the authors from an X-ray diffraction investigation of 10 specimens of these alloys: (1) The value of the lattice constant does not depend on Cu content and coincides with the constant for pure Si. (2) Since the alloying components cannot be identified as independent phases or as a compound, they must be present in the form of solid solution, both types of which are present in all alloys. (3) The presence of Cu and other impurities is manifested in the arising of satellite-

"Radical Treatment of Tumors of the Central Region of the Major Hemisphere (Preliminary Report)."

Prague, Československá Neurologie, Vol XXVI(LIX), No 5, September 63, pp 330-332.

Abstract [Authors' English summary]: The possibility is pointed out of more radical surgery of some tumors localized in the central motor region of the major hemisphere. Three cases are described in which "delaying tactics" provided enough time for rehabilitation followed by a radical removal of the tumor. Five references, including 1 Czech.

ABSTRACT: Detailed description of two patients, female aged 29 and male aged 28 with epileptic attacks, the first being a Jacksonian and the second brought about by stimulation of an epileptic focus. Electrocorticography is considered very valuable for diagnostic and etiologic classification. Orig. art. has: 4 figures. [Based on Eng. abst.] [JPRS]

TITLE: Blepharospasm, a hyperkinesis of extrapyramidal origin

SOURCE: Ceskoslovenska neurologie, no. 2, 1966, 135-139

TOPIC TAGS: nervous system disease, neurologic surgery, cerebral cortex, ophthalmology, pathogenesis

ABSTRACT: The importance of the psychological factor in the pathogenesis of blepharospasm is usually overrated. Blepharospasm is usually due to isolated extrapyramidal hyperkinesis due to a lesion in the oral part of the caudate nucleus, or in the dentato-rubro-olivary circuit. A cortical approach to the treatment is suggested, viz., a subcortical undercutting of the motor area for the m. orbicularis oculi in the gyrus praecentralis of the minor hemisphere. 10 patients were treated in this manner, all with very satisfactory results. [Based on author's Eng. abst.] [JPRS]

DVORAK, M.; Veterinary Research Institute (Vyzkumny Ustav Veterinarniho Lekarstvi), Brno - Medlanky.

"The Levels of Ascorbic Acid in Adrenal Glands and Liver of Piglets of Various Ages, and Their Relation to the Vitamin A Reserve."

Prague, Veterinarni Medicina, Vol 11, No 6, Jun 66, pp 371-377

Abstract [Author's English summary modified]: Total ascorbic acid in adrenal glands and in liver, and Vitamin A in the liver of 113 piglets aged 1-92 days were determined. Average values of ascorbic acid were above 200 mg% in adrenal glands in all piglets who received the colostrum; concentration in the liver changes according to the age; the maximum was 24.8 ± 6.8 mg% at the beginning of the second week of age. 1 Table, 19 Western, 8 Czech, 8 Russian references. (Manuscript received 25 Feb 66).
